

YOUR COAL ASH SOLUTION PROVIDER

As an industry leader in fly ash marketing for over 25 years, Ashcor has engineered a commercial solution that transforms the way fly ash is sourced. Our patented Reclaimed Ash Management (RAM™) technology processes previously stored and buried coal ash deposits (including fly ash comingled with bottom ash) into a high-grade pozzolan for use in concrete. Ashcor can process this discarded comingled ash into a usable product without an ash waste stream. Using our RAM™ technology, we are the first ash marketer to manufacture a material from harvested bottom ash and fly ash that meets and exceeds ASTM C618 and CSA A3000 specifications.

As a power generator, your priority is energizing communities. Ashcor's history of working closely with utilities and forming successful partnerships has honed our understanding of ash management, coal ash deposits and how to generate the highest value from CCP materials. A longstanding fly ash marketer and now a pioneer in ash beneficiation, Ashcor can address your ash concerns so you can focus on your core business.

Ashcor is focused on the reclamation of comingled fly and bottom ash from ponds and landfills for beneficial use. Our RAM™ technology is the solution to mounting economic and environmental pressures surrounding ash management.

OUR PARENT COMPANY

As a subsidiary of ATCO Ltd., we possess an intimate appreciation for the concerns of power producers. For many years, ATCO held a portfolio of coal fired electricity generation assets. Ashcor was born from a need to manage and maximize by-product from power generation.

ATCO is a diversified \$24 billion global corporation that delivers service excellence and innovative business solutions across several platforms, including electricity generation, natural gas distribution and transmission, energy storage, industrial water, retail energy and permanent and temporary modular structures. ATCO serves more than two million customers around the world, providing integrated, forward-thinking solutions.

Ashcor's RAM™ technology provides a unique opportunity to remove ash from impoundments through beneficial use, minimizing long-term site environmental risks and costs.
