

## YOUR TRUSTED ASH EXPERT

With over 20 years of experience as a leading independent fly ash marketer, we have deep technical expertise coupled with sales and logistics solutions designed to fit any of your ash needs.

### RAM™

Ashcor is committed to offering a long-term supply of fly ash. With our patent-pending Reclaimed Ash Management (RAM™) technology, we've transformed the way fly ash is sourced. Our RAM™ technology processes previously stored coal ashes into an engineered, high quality pozzolan, while continuing to offer the outstanding performance characteristics you've come to expect from Ashcor fly ash. RAM™ facilities feature the unique capability to process comingled, harvested bottom ash and fly ash, providing a supply source for many years to come. We perform regular product testing and access independent, internationally recognized laboratories. Our fly ash is classified as "pre-consumer recycled content" for LEED certification purposes and meets CSA and ASTM specifications.

Decoupled from coal fired power generation, Ashcor is dedicated to offering a year-round supply of ash, on demand.

## OUR PARENT COMPANY

ATCO is a world-class \$22 billion diversified global corporation operating for over 70 years and serving more than two million customers around the world.

ATCO delivers service excellence and innovative business solutions across several platforms, including electricity generation, natural gas distribution and transmission, energy storage, industrial water, retail energy and permanent and temporary modular structures.

We offer a seamless buying experience with competitive product value. Ashcor is your smart and worry-free choice.
